Internship Overview:

Total Duration: 4Months (16 Weeks)
Total Learning Hours: Up to 240 Hours
Delivery Mode: Hybrid (Live + Recorded + Platform-based Learning)
Learning Platform: Blackbucks TaPTaP LMS
Project : Individual Project selection
Communication Mode: Domain-wise WhatsApp Groups

Program Objectives

The **Blackbucks Skill Internship Program 2026** aims to:

1. Develop **industry-ready skills** through structured, domain-specific training.
2. Provide **hands-on project experience** and mentor-driven guidance.
3. Strengthen **placement and employability readiness** through mock tests and continuous evaluation.
4. Offer exposure to **modern technologies and workflows** in real-world problem-solving.
5. Enable participants to graduate with a **project portfolio and certification** validating 240 hours of learning.

Program Structure

Pre-Program Phase (Week 1 – 4)

Objective: Prepare interns for core learning and professional readiness.

Activities:

- **Daily Placement & Employability Practice Papers**
- **Pre-Assessment Test**
- **Prerequisite Courses & Recorded Content**
- **Orientation Session (2 Hours)** introducing mentors, LMS, and domains.

Foundation Phase (Week 5 – 6)

Objective: Introduce all to the selected domains through conceptual and overview sessions.

Schedule:

- **Mon / Wed / Fri:** Basics of each domain
- **Tue / Thu / Sat:** Overview and domain introductions

Weekly Activities:

- 1 Assessment (1 hr)
- 1 Assignment
- 1 Placement Test
- 1 Employability Test

Core Internship Phase (Week 7 – 12)

Objective: Strengthen technical and practical expertise.

Weekly Pattern:

- 3 Live Sessions (2 hrs each)
- 1 Assignment
- 2 Assessments
- 1 Employability Test

Recap & Review Phase (Week 13 – 14)

Objective: Revise all domain concepts and prepare for project work.

- Mentor-led recap sessions
- Domain-wise revision & short tests

Project Implementation Phase (Week 15)

Objective: Apply learning through a guided, mentor-supported project.

Details:

- 2 Mentor Support Sessions per week (6 total)
- Project divided into 5–6 steps (each step: 3 days)
- Weekly placement and employability tests continue

Final Phase (Week 16)

Objective: Assess final performance and close the internship.

- **Grand Test – Part 01 & 02 (Total 5 Hours)**
- **Project Review & Certification Ceremony**

About the Blackbucks

The Blackbucks: Pioneering Campus Success

The Blackbucks is India's premier **Campus Success Platform**, committed to transforming higher education and placement ecosystems. As a trusted partner of top **Higher Education Institutions (HEIs)**, Blackbucks provides a robust suite of technology-driven solutions designed to empower students through rigorous training, structured practice, and successful placement outcomes.

Vision: Empowering Students for a Brighter Tomorrow

At The Blackbucks, we believe in **leveraging technology to unlock the full potential** of every student. Our mission is to bridge the gap between academic learning and real-world careers by offering comprehensive support systems that align education with employability.

Key Offerings

- **TaPTaP Platform** – Advanced learning and placement tracking system
- **VPL Platform** - College domain wise labs
- **BBX Swift** – Personalized learning engine for upskilling and certification
- **University Certification Programs** – Job-linked career pathways integrated with higher education

Together, these tools provide a **360° learning and**

placement experience, tailored for diverse academic backgrounds.

12 Years of Impact & Innovation

Founded in **2013**, The Blackbucks began with a revolutionary idea: *"Technology for Students."* Over the past decade, we've grown into a world-class technology company with a track record of innovation, impact, and measurable success in student outcomes.

Recognized Leaders in Post-Graduation Careers

Our **Post Graduation Career Programs**, run in collaboration with the **Government of Andhra Pradesh**, have been **awarded for seven consecutive years**, showcasing our excellence in job-linked education and guaranteed placement pathways. We take pride in offering cutting-edge training in:

- Software & Product Development
- Artificial Intelligence & Machine Learning
- Data Science & Emerging Technologies
- Cybersecurity, MBA, and Entrepreneurship Tracks

Why Choose The Blackbucks?

- **10+ years of expertise** in student-centered ed-tech innovation
- **Guaranteed placement programs** across technical and management domains
- A growing network of **200+ partner colleges and 1000+ recruiters**
- Proven success with **tens of thousands of student placements**

Join Us: Where Learning Meets Opportunity

Whether you're a **student seeking career transformation**, an **educational institution aiming to boost placement performance**, or a **recruiter looking for top talent**, The Blackbucks is your destination for success.

Company Snapshot

- **Website:** www.theblackbucks.com
- **Industry:** Technology, Information & Internet
- **Headquarters:** Hyderabad, Telangana, India
- **Company Size:** 51–200 employees
- **Founded:** 2013
- **LinkedIn Presence:** 143+ professionals currently associated

Specialties

IT & Software | Product Development | Engineering | Electronics | AI/ML | Data Science | Emerging Technologies | Higher Education | Career Services | Entrepreneurship | Jobs & Placements

Mobile Application Development – 10 Module Syllabus

Module 1: Introduction to Full Stack & Java Development

- Overview of Full Stack Development
- Web & Mobile Application Architecture
- Client–Server Model
- Development Environment Setup

Module 2: Programming Foundations

- Variables & Data Types
- Control Structures (Loops & Conditions)
- Object-Oriented Programming (OOP) Concepts
- Classes, Objects & Methods

Module 3: Frontend Development Basics

- HTML Fundamentals
- CSS Styling & Layouts
- JavaScript Basics
- Responsive Design Principles

Module 4: Data Handling & API Basics

- Introduction to APIs
- HTTP Methods & JSON
- Fetch API / AJAX
- API Integration Basics

Module 5: Java Web Technologies

- JavaFX / JSP Basics
- Servlets Architecture
- MVC Pattern in Java
- Java DTO Concepts

Module 6: Backend Development with Spring Boot

- Spring Boot Fundamentals
- Building REST APIs with Spring Boot
- Spring Boot Project Structure
- Dependency Injection

Module 7: Database Management

- Database Concepts
- MySQL / PostgreSQL Basics
- CRUD Operations
- Database Integration with Java

Module 8: Security & Testing

- Spring Security Basics
- Authentication & Authorization
- Unit Testing with JUnit
- API Testing

Module 9: Deployment & Cloud

- Deploy Java Apps using Tomcat
- AWS / Azure for Java Applications
- JVM & Application Performance Tuning
- Microservices & WebSockets

Module 10: Full Stack Integration & Capstone

- Frontend + Backend + Database Integration
- Building End-to-End Java Full Stack App
- Deployment & Optimization
- Capstone Project Presentation

Pre-Program Phase- 01 (Week 01 – 04) Monthly

Summary Report – December 2025

Internship Duration Covered

Month: December 2025 – Early January 2026
Program: Blackbucks Long Term Internship (LT 2026)
Focus Areas: Pre-requisite Skill Building, Company-Based Evaluation, Employability Assessments

---

Overview of the Internship Activities

The Blackbucks Long Term Internship (LT 2026) is designed to prepare students for industry readiness through a structured approach involving **technical foundation strengthening**, **company-aligned mock assessments**, and **employability evaluations**.
During December 2025, the program focused on completing pending pre-requisite topics and periodically evaluating students' progress through mock tests and employability assessments.

Module 1: Pre-Requisites Learning (Skill Foundation Module)

Duration

- Conducted across **Weeks 01 to 04**
- Multiple days each week based on pending course requirements

Description

This module focused on strengthening students' **core technical and conceptual foundations** required for successful participation in the internship and future industry roles. Students continued learning pending syllabus topics aligned with their selected domain.

Key Learning Outcomes

- Completion of balance technical topics from the assigned course
- Improved conceptual clarity and problem-solving skills
- Readiness for company-level assessments and real-world tasks
- Reinforcement of fundamentals required for advanced internship activities

Mode

- Self-paced and guided learning
- Progress monitored through scheduled assessments

Module 2: Company-Based Mock Tests

Schedule

- **Mock Test 01:** 9th December 2025
- **Mock Test 02:** 16th December 2025
- **Mock Test 03:** 23rd December 2025
- **Mock Test 04:** 30th December 2025
- **Timing:** 6:00 PM – 11:00 PM

Description

Company-based mock tests were conducted to simulate **real corporate hiring assessments**. These tests were designed based on actual company recruitment patterns to familiarize students with industry expectations.

Key Objectives

- Evaluate technical, aptitude, and logical reasoning skills
- Prepare students for real placement and internship tests
- Improve time management and assessment handling skills
- Identify skill gaps and areas for improvement

Outcome

Students gained hands-on experience with company-style evaluations, enhancing their confidence and assessment readiness.

Module 3: Employability Assessments

Schedule

- **Assessment 01:** 13th December 2025
- **Assessment 02:** 20th December 2025
- **Assessment 03:** 27th December 2025
- **Assessment 04:** 3rd January 2026
- **Timing:** 6:00 PM – 11:00 PM

Description

Employability assessments were conducted to

measure students' overall **job-readiness**, beyond technical skills. These assessments focused on aptitude, analytical thinking, communication ability, and professional awareness.

Key Evaluation Areas

- Problem-solving and analytical ability
- Logical reasoning and aptitude skills
- Industry readiness and employability parameters
- Performance consistency across assessments

Outcome

The assessments provided a structured benchmark of student readiness and helped track progressive improvement throughout the internship period.

Overall Internship Outcomes (December 2025)

- Successful continuation and completion of pending pre-requisite learning modules
- Exposure to **four company-based mock tests**
- Participation in **four employability assessments**
- Enhanced technical competency and assessment confidence
- Improved industry alignment and placement preparedness

Conclusion

The December 2025 phase of the Blackbucks Long Term Internship (LT 2026) provided a structured and outcome-oriented learning experience. Through continuous learning, regular mock testing, and employability assessments, students demonstrated progressive improvement in both technical and professional competencies.

This month served as a strong foundation for advanced internship activities and real-world industry engagement in subsequent phases.

Foundation Phase 02 (Week 05 – 06)

Blackbucks Long Term Internship (LT 2026)
Live Sessions Summary Report – Mobile Application Development Period Covered: January 2026

Phase Overview

The Fundamental Phase focused on building core programming foundations, web development concepts, and initial placement readiness. This phase emphasized Full Stack development fundamentals, JavaScript programming, Mobile basics, and early exposure to company-based assessments.

Week 05: Introduction to Full Stack & Programming Foundations

Duration: 5th January 2026 – 10th January 2026

Key Activities

- Internship onboarding and orientation
- Introduction to Mobile session
- Programming Foundations session (OOP, Variables, Loops)
- Session-wise assessments
- TCS NQT Placement Mock Test
- Employability Test – 01

Learning Focus

- Overview of Mobile application development
- Understanding programming fundamentals
- Object-Oriented Programming concepts
- Variables, loops, and basic program logic
- Familiarization with placement-style assessments

Week 05 Outcomes

- Clear understanding of full stack development fundamentals
- Improved logical and programming thinking
- Basic knowledge of OOP concepts and program structure
- Initial benchmarking of technical and aptitude skills

Week 06: Core Programming Concepts & Application Logic

Duration: 12th January 2026 – 17th January 2026

Key Activities

- Session on core programming concepts
- Application logic and structured coding session
- Lesson plan-based learning and revisions
- Session-wise assessments

Learning Focus

- Control structures and program flow
- Writing structured and modular programs
- Applying programming concepts to real-world applications
- Strengthening coding logic and debugging skills

Week 06 Outcomes

- Conceptual clarity in core programming concepts
- Ability to build structured program logic
- Improved problem-solving and coding efficiency

Phase 03: Core Concept Phase (Week 07 – 12)

Duration: Week 03 onwards (February 2026)

Phase Overview

The Core Concept Phase focused on advanced mobile application development concepts, backend integration, database management, and deployment practices. This phase strengthened practical mobile development skills and enhanced placement readiness through continuous assessments and hands-on learning.

Week 07: Data Handling, APIs & Version Control

Duration: 19th January 2026 – 24th January 2026

Key Activities

- Session on Data Handling & APIs Basics
- Assessment 02
- Placement Mock Test (3 Hours Duration)
- Session on Version Control & Project Setup (Git, GitHub)
- Assessment 03
- Placement Mock Test (3 Hours Duration)

Learning Focus

- Data handling techniques in web applications
- API concepts and request-response architecture
- Version control using Git and GitHub
- Project setup and collaborative development workflows

Week 07 Outcomes

- Ability to work with APIs and structured data
- Understanding of version control workflows
- Improved project management and collaboration skills
- Enhanced readiness for placement-based assessments

Week 08: Mobile UI Design & Backend Integration

Duration: 2nd February 2026 – 7th February 2026

Key Activities

- Placement Mock Test (3 Hours Duration)
- Assignment 2
- Session on Mobile UI Components & Layouts
- Assessment
- Employability Test
- Session on Backend for Mobile Apps (Firebase / REST APIs)

Learning Focus

- Designing mobile user interfaces using components and layouts
- Mobile UI/UX principles and responsive design
- Backend integration using Firebase and REST APIs
- Handling data communication between mobile apps and servers

Week 08 Outcomes

- Ability to design responsive mobile application interfaces

- Understanding backend connectivity for mobile apps
- Improved UI development and integration skills
- Strengthened placement readiness through assessments

Week 09: Mobile Databases & Authentication

Duration: 9th February 2026 – 14th February 2026

Key Activities

- Placement Mock Test (3 Hours Duration)
- Employability Test
- Session on SQLite / Cloud Databases
- Assessment
- Assignment 3
- Session on Mobile App Authentication

Learning Focus

- Local database management using SQLite

- Cloud database integration for mobile applications
- Authentication and authorization in mobile apps
- Secure user login and data handling

Week 09 Outcomes

- Ability to manage mobile application data storage
- Understanding of authentication mechanisms
- Improved knowledge of secure mobile app development
- Enhanced backend integration capabilities

Week 10: State Management & API Integration

Duration: 16th February 2026 – 21st February 2026

Key Activities

- Assessment
- Placement Mock Test (3 Hours Duration)
- Session on State Management & Navigation
- Employability Test
- Assignment 4
- Session on API Integration in Mobile Apps

Learning Focus

- Application state management techniques
- Navigation and screen transitions in mobile apps
- Integrating external APIs for dynamic data
- Managing application data flow and UI updates

Week 10 Outcomes

- Ability to manage app states and navigation flows
- Practical experience with API integration
- Improved mobile app architecture understanding
- Strengthened development and debugging skills

Week 11: Testing & Deployment of Mobile Applications

Duration: 23rd February 2026 – 28th February 2026

Key Activities

- Assessment
- Placement Mock Test (3 Hours Duration)
- Session on Mobile App Testing & Debugging
- Employability Test
- Assignment 5
- Session on Mobile App Deployment (Play Store / App Store)

Learning Focus

- Debugging techniques for mobile applications
- Mobile application testing strategies
- Preparing applications for deployment
- Publishing apps to Play Store and App Store

Week 11 Outcomes

- Ability to test and debug mobile applications
- Understanding of mobile app deployment processes
- Improved application stability and performance
- Enhanced industry readiness

Week 12: Advanced Mobile Features & Performance Optimization

Duration: 2nd March 2026 – 7th March 2026

Key Activities

- Assessment
- Placement Mock Test (3 Hours Duration)
- Session on Cloud Services, Push Notifications & Sensors
- Employability Test
- Assignment 6
- Session on Mobile App Performance & Mobile UI/UX + Backend

Learning Focus

- Integrating cloud services into mobile apps
- Implementing push notifications and device sensors
- Mobile application performance optimization
- Advanced UI/UX improvements and backend integration

Week 12 Outcomes

- Ability to integrate advanced mobile features
- Improved mobile application performance optimization skills
- Enhanced understanding of full mobile application lifecycle
- Strengthened mobile development skills and industry readiness

---

Phase 04: Recap & Review Phase (Week 13 – 14)

Duration: Final Weeks (March 2026 onwards)

Final Project :

Introduction

The Daily You – Mood Tracker & Diary mobile application helps users record their daily emotions and thoughts. Many people experience different feelings every day but do not track them. This application allows users to select their mood and write a short diary entry. Over time, the user can see their emotional patterns and reflect on their daily experiences.

Objective :

- To develop a user-friendly mobile app
- To track daily emotions
- To store diary entries
- To analyze mood patterns

Problem Statement :

- People do not track their daily emotions
- No simple app combining mood + diary
- Difficult to analyze emotional patterns

Solution :

- Developed a mobile app for mood tracking
- Simple emoji-based mood selection
- Diary writing feature
- Visual analytics using charts

Key Features :

- Mood Tracking (emoji-based)
- Daily Diary Entries
- Mood Analytics (charts)
- Calendar View
- Thoughtful UI Design

Step By Step Procedure :

Step 1 – Start the Application : The user opens the Daily You – Mood Tracker application on their mobile device. After opening the application, the system loads the main interface.
Step 2 – Display Home Screen : The application displays the home screen. The home screen shows different mood options such as Happy, Sad, Angry, Neutral and Excited.
Step 3 – Select Mood : The user selects the mood that best represents how they feel on that day. This helps the system understand the user's emotional condition.
Step 4 – Open Diary Entry Screen : After selecting the mood, the application moves to the diary entry screen where the user can write about their day.
Step 5 – Write Diary Entry : The user writes a short note about their day. The note may include their experiences, feelings, or important events that happened during the day.
Step 6 – Save the Entry : After writing the diary note, the user clicks the save button.
Step 7 – Collect Data : The application collects the selected mood, the diary text written by the user, and the current date and time.
Step 8 – Store Data : The system saves this information in a local database so that the data can be accessed later.
Step 9 – View History : The user can open the history section to view previously saved mood entries and diary notes.

Step 10 – Display Records : The application retrieves stored information from the database and displays it in an organized list.
Step 11 – End Process : The process repeats whenever the user records a new mood and diary entry

Logic or Method Used :

Overview
The Daily You Mood Tracker & Diary application works based on a simple logic that combines user input, data storage, and data retrieval. The main idea of the system is to allow users to record their daily mood and thoughts so that they can review them later.
Method Used in the System :
First, the user interacts with the application through a simple user interface. The home screen provides mood icons that represent different emotions. The user selects the mood that matches their current feeling.
Once the mood is selected, the system redirects the user to the diary entry page.
On this page, the user can write their thoughts, experiences, or feelings about the day. This diary entry allows the user to record personal reflections in a digital format. After writing the diary entry, the user presses the save button. The application
then collects three important pieces of information:

- Selected mood
- Diary text
- Current date and time

The system processes this information and stores it in a local database. The
database keeps all entries safely stored on the user's device.
Later, when the user opens the history page, the application retrieves previously saved data from the database. These entries are displayed in a list so the user can easily review past moods and diary notes. This method helps users track their emotions over time and understand their daily emotional patterns.

Model or Technique Applied

Development Model

The Daily You Mood Tracker & Diary project uses a mobile application development model based on modern mobile technologies. The application is developed using the **Flutter framework and the Dart programming language. These technologies allow developers to create attractive and responsive mobile applications.

Technique Used in the System

1. **User Interface Design :** The application uses a thoughtful user interface design technique. The interface is simple, clean, and easy to use. Mood icons are clearly visible so users can select their feelings quickly.

2.Data Storage Technique : The application uses a local database storage technique. This means all mood records and diary entries are stored inside the mobile device. A lightweight database system such as SQLite is used for storing data.

3. Data Retrieval Technique : When users want to see their past entries, the system retrieves stored information from the database and displays it on the history screen.

4. User Interaction Technique : The application follows a user-centered interaction approach where users interact with buttons, icons, and text fields to enter information.

These techniques make the application simple, efficient, and user-friendly.

Process Flow of the System

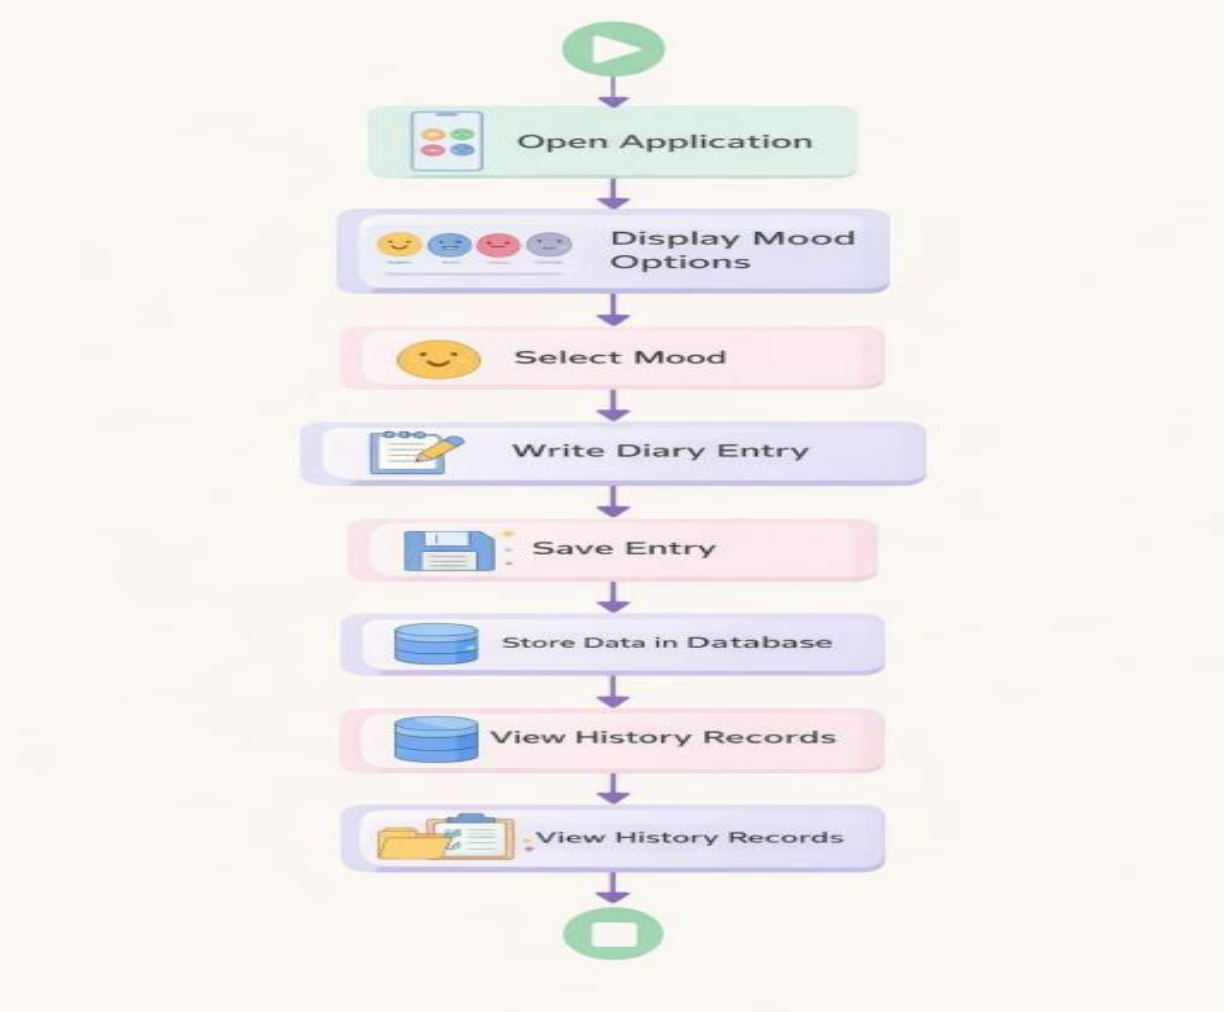
System Overview

The process flow describes how the application works from the moment the user opens the app until the diary entry is saved and displayed in the history section.

Process Flow Explanation :

First, the user opens the application on their mobile device. The system loads the home screen where mood options are displayed. The user selects the mood that represents their emotional state. After selecting the mood, the system navigates to the diary entry screen. On this screen, the user writes a short diary note describing their day or feelings. Once the diary entry is completed, the user presses the save button. The system processes the data and stores it in the database along with the date. Later, if the user wants to check previous entries, they can open the history section. The system retrieves stored data and displays it in an organized format.

Process Flow Daigram :



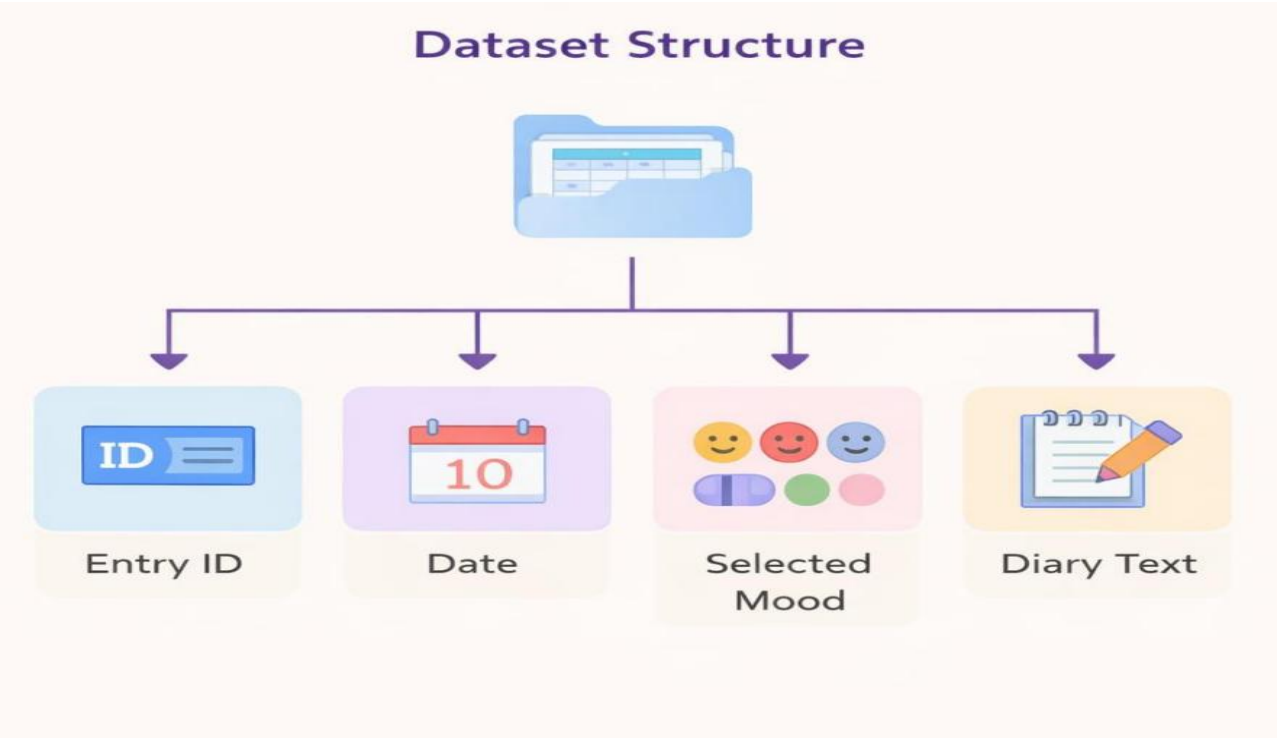
Dataset of the Project
Overview
The dataset for the Daily You Mood Tracker & Diary project consists of user- generated mood entries and diary notes. The dataset represents the information recorded by users during daily use of the application. Each entry in the dataset contains information about the user's mood, diary text, and the date of the entry.

Purpose of the Dataset

- The dataset helps the application to
- Store daily mood records
- Maintain diary entries
- Allow users to review past emotional experiences
- Identify emotional patterns over time

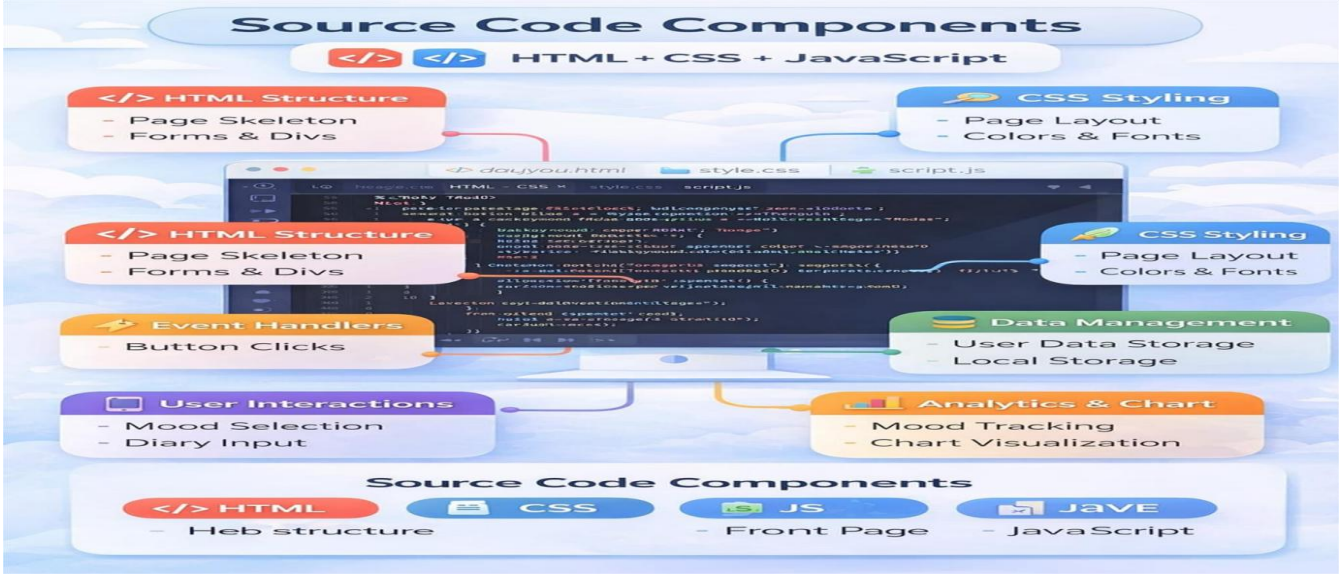
By analyzing this stored data, users can better understand their emotional health and daily life experiences.

DataSet Structure :



SourceCode Overview :

•Developed using HTML, CSS, and JavaScript
•Frontend-based mobile/web application
•Uses localStorage for data storage



Source Code:

```

Conclusion :

•Successfully developed mood tracking app
•Helps users manage emotions
•Useful for daily life and mental health

Phase Overview

The Recap & Review Phase was designed to consolidate all the knowledge and skills acquired throughout the program. This phase emphasized revision of key concepts, strengthening weak areas, and ensuring readiness for real-world challenges and placement opportunities.

Week 13: Mobile App Integration & Performance Concepts

Duration: 9th March 2026 – 14th March 2026

Key Activities

- Placement Mock Test *(3 Hours Duration)*
- Session on Cloud Services, Push Notifications & Sensors
- Employability Test
- Practice
- Session on Mobile App Performance, Mobile UI/UX & Backend Integration

Learning Focus

- Understanding cloud service integration in mobile applications
- Learning the role of push notifications and mobile device sensors
- Exploring mobile app performance optimization techniques
- Introduction to mobile UI/UX concepts and backend connectivity
- Continuous assessment and placement readiness preparation

Week 13 Outcomes

- Ability to understand and apply mobile app integration concepts
- Improved knowledge of cloud services, notifications, and sensors in app development
- Better understanding of mobile app performance and UI/UX principles
- Strengthened technical confidence through assessments and employability preparation
- Enhanced readiness for real-world mobile application development workflows

Week 14: Project Development &

Evaluation Duration: 16th March 2026 –

21st March 2026

Key Activities

- Session on Project Phase
- Employability Test
- Placement Mock Test *(3 Hours Duration)*
- Holiday
- Assignment 5
- Session on Project Phase

Learning Focus

- Continued implementation of mobile application development concepts through project-based learning
- Strengthening understanding of app development workflow and project execution
- Enhancing problem-solving and practical implementation

skills
- Continuous placement preparation through mock tests and employability assessments
- Reinforcing learning through assignments and structured project sessions

Week 14 Outcomes

- Ability to apply mobile application development concepts in project tasks
- Improved understanding of app development workflow and execution
- Strengthened technical, analytical, and implementation skills
- Better confidence in handling project-based mobile application scenarios
- Enhanced readiness for placement and real-world development environments

---

Phase 05: Project Implementation Phase (Week 15)

Duration: Mid March 2026 onwards

Phase Overview

The Project Implementation Phase focused on applying mobile development skills in real-world scenarios, emphasizing app design, development, and deployment.

Week 15: Mobile App Finalization & Presentation

Duration: 23rd March 2026 – 28th March 2026

Key Activities

- Session on Project Phase
- Employability Test
- Placement Mock Test (3 Hours Duration)
- Assignment 5
- Session on Project Phase

Learning Focus

- Finalization of mobile applications
- Performance tuning and bug fixing
- Integration of all app features
- Testing, validation, and refinement
- Preparation for technical interviews and assessments

Week 15 Outcomes

- Ability to finalize and present mobile applications
- Improved app optimization and debugging skills
- Strong understanding of end-to-end app development
- Enhanced confidence and readiness for job roles

Phase 06: Final Phase (Week 16)

Duration: Week 16 (March 2026 – Ending Phase)

Phase Overview

The Final Phase focused on completing all documentation and submissions, ensuring a professional conclusion to the internship.

Key Focus Areas

- Final project report preparation and submission
- Documentation of all phases and learnings
- Portfolio and resume finalization
- Submission of internship deliverables
- Feedback and evaluation

Outcome

Students successfully completed and submitted their work, showcasing a well-structured portfolio aligned with Mobile Application Development industry standards.

---

Overall Phase-Wise & Week-Wise Outcomes

- Structured progression from Java web development to advanced backend architecture
- Continuous assessments and skill benchmarking
- Hands-on exposure to Spring Boot, MySQL, REST APIs, and cloud deployment
- Practical experience in authentication, testing, and microservices
- Strong placement-oriented preparation and improved professional readiness

Conclusion :

The phase-wise structure of the **Blackbucks Long Term Internship 2026 – Mobile Application Development** ensured systematic skill development. From the **Fundamental Phase (Phase 02)** to the **Core Concept Phase (Phase 03)**, students built strong analytical foundations and practical expertise.

The **Recap & Review Phase (Phase 04)** strengthened understanding through revision and interview preparation, while the **Project Implementation Phase (Phase 05)** provided hands-on experience with real-world projects, ensuring complete industry readiness.
